Days of training

Various locations
around Australia

Accurate and
repeatable method

On-ground training

Responsive online
support system

Integrated data
collection app

Pre-training webinars
and reading material

Comprehensive
documentation

The EMSA on-ground training program will:

- Demonstrate key field data collection methods and techniques (including app data entry, equipment use, data and sample management)
- build knowledge and understanding of how the EMSA protocols can be used by NRM projects
- improve understanding of EMSA module dependencies and data workflows
- provide practical experience selecting and laying out an EMSA plot; and implementing the vegetation modules
- include a case-study example illustrating the workflows and logistics required to implement EMSA monitoring
- assist in accessing additional resources and onground support.

EMSA modules have been developed by TERN (Terrestrial Ecosystem Research Network) for the Australian Government Department of Climate Change, Energy, the Environment and Water to support Australian Government investment programs.
